

Cam Followers (Stud Type Track Rollers) **Roller Followers** (Yoke Type Track Rollers)

High-quality products with long life and proven reliability.
These series of cam followers and roller followers significantly
improve cost efficiency.

**Significantly improve cost efficiency
with long operating life and
maintenance-free operation.**

Cam Followers and Roller Followers

1. Long life

A special thrust washer with improved anti-seizure properties of the sliding surface (bearing interior) is utilized.

2. Maintenance-free

Labyrinth seals enable maintenance-free operations.

3. Resistant to heavy impact load

A thick outer ring and crowned rollers provide resistance to shock loads.

4. Match customer needs

Available in two standard types to match customer needs: with-cage type for high-speed applications, or full-complement type for high-load applications.

Cam followers are available in two types; one with a cage for high speed, and the other with a full complement for heavy loads. In the cam follower with seals, a special thrust washer is employed for the sliding surface inside the bearing to improve heat-seizure resistance. Labyrinth sealing also ensures maintenance-free operation.

1. Types

Cam followers are available in the standard types shown in Table 1. These standard bearings have a screwdriver slot built into the stud head, while the outer rings have a cylindrical outside surface.

Cam followers, which are equipped with a thick outer ring, crowned rollers, and a stud with a hardened raceway surface, are especially tough and can sustain shock loads.

Table 1 Bearing Types

Code		Details
Metric	FCR	Full complement, without seal
	FCRS	Full complement, with seal and thrust washer
	FCJ	With cage, without seal
	FCJS	With cage, seal, and thrust washer
Inch	CR	Full complement, without seal
	CRS	Full complement, with seal and thrust washer

Bearings of the following unique specifications are available for manufacture upon request:

2. Special Specifications

- (1) Hexagonal socket on the stud head (refer to the Bearing Table)
- (2) Regular stud type with eccentric bushing stud (refer to the Bearing Table)
- (3) Threaded end of stud lubrication hole (refer to the Bearing Table)
- (4) An outer ring with a spherical outside surface (refer to page 4)

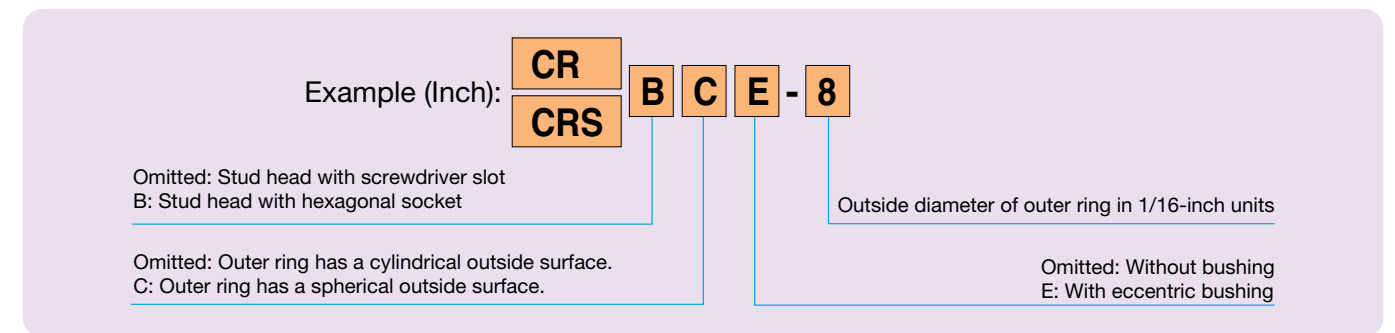

These specifications are indicated in the bearing number. Please use the Bearing Numbers as indicated on page 4 when placing orders. In addition to the above, products with their exposed surfaces treated with a black oxide layer to enhance corrosion resistance, as well as products of special shapes and specifications, can also be manufactured. Please contact NSK for further details.

3. Specification Number

Example

- FCRE-16** Full complement, with screwdriver slot and eccentric bush. Outside diameter of outer ring is 16 mm.
- FCJSB-16** With cage, seal/thrust washer, and hexagonal socket. Outside diameter of outer ring is 16 mm.
- FCJSP-16** With cage, seal/thrust washer, and threaded end of stud lubrication hole. Outside diameter of outer ring is 16 mm.
- FCRSBE-16R** Full complement, with seal/thrust washer, hexagonal socket, and eccentric bushing. The outer ring has an outside diameter of 16mm and a spherical outside surface.

Example

- CRE-8** Full complement, with screwdriver slot and eccentric bushing. Outside diameter of outer ring is 12.700 mm (8/16 inch).
- CRSB-8** Full complement, with seal/thrust washer and hexagonal socket. Outside diameter of outer ring is 12.700 mm (8/16 inch).
- CRSBCE-8** Full complement, with seal/thrust washer, hexagonal socket, and eccentric bushing. The outer ring has an outside diameter of 12.700 mm (8/16 inch) and a spherical outside surface.

4. Spherical Radius of Outer Ring

Spherical radii for metric bearings are shown in Table 2 and for inch bearings in Table 3.

Table 2 Spherical Radius, *R*, of Outer Ring of Metric Bearings Units: mm

All Bearing Numbers	<i>R</i>
	500

Table 3 Spherical Radius, *R*, of Inch Bearings Units: mm

CRC-26	500	CRC-96	1 400

Note (°) This uses CRC bearings as an example. However, since dimension series are the same, the *R* dimensions shown in the above table should also be applied to CRSC bearings.

5. Accuracy

Cam followers are manufactured with the dimensional tolerances shown in Table 4.

Running accuracy is subject to ISO Class 0.

Table 4 Cam Follower Dimensional Tolerances

Units: μm

Type		Stud Diameter Deviation, Δd_{mp} , or Fitting Tolerance		Single Plane Mean Outside Diameter Deviation, ΔD_{mp}				Deviation of Outer Ring Width, ΔC_s

6. Accessories

Cam followers include a pipe plug, nut, washer, and grease nipple are available as accessories.

When ordering, please add the part code, shown in Table 5, after the bearing number.

7. Applications to Maximize Performance

■ Fitting

The recommended fittings for the mounting area of cam follower studs are shown in Table 6. Since cam followers use cantilever mounting, the fitting for the stud and mounting hole should be assembled with as little play as possible. In case there is interference in the fitting of the stud and mounting hole, the center of the stud end should be inserted with a press. The side plate should be securely fixed onto a plane surface, square to the center axis, without play.

To sufficiently support the side plate, the dimension of the shoulder should be larger than the value of F shown in the bearing table.

■ Maximum Permissible Load

The maximum radial load that the cam follower can carry is determined by the bearing strength and shear strength of the stud rather than the load rating for needle bearings. This value is given in the bearing table as the maximum permissible load. The cam follower can deliver maximum

■ Permissible Track Load

The permissible load of the track is determined by compression strength or hardness. The permissible load of the track shown in the bearing table is the value of a track made of steel with a hardness of HRC40. Table 7 indicates the permissible load coefficient of the track for each hardness. The permissible load of the track for each hardness can be obtained by multiplying the permissible load of the track shown in the bearing table by the permissible load coefficient of the track corresponding to each hardness.

■ Limiting Speed

The cam follower has a bearing with a cage for high speed applications. Its limiting speed is shown in Table 8. Limiting speed for the full-complement bearing type is one-third that

Table 8 Limiting Speeds for Metric Bearings with Cage

Bearing Number	Limiting Speed (rpm)	Bearing Number	Limiting Speed (rpm)
FCJB-10	34 000	FCJ-40	5 300
FCJ-12	26 000	FCJ-47	4 800
FCJ-16	16 000	FCJ-52	4 800
FCJ-19	12 000	FCJ-62	3 800
FCJ-22	10 000	FCJ-72	3 800
FCJ-26	10 000	FCJ-80	3 000
FCJ-30	7 500	FCJ-85	3 000
FCJ-32	7 500	FCJ-90	3 000
FCJ-35	6 000		

Play in the mounting part should be avoided because it may not only cause inclination of the stud, but also create considerable deflection when a load is imposed. The load would also be unevenly imposed on the rollers due to edge contact between the outer ring and track (on which the outer ring runs).

Table 6 Recommended Fitting for Stud Mounting Part

Type		Fitting Tolerance of Mounting Hole
Metric	FCR, FCJ, FCRS, FCJS	JS7 (J7)
Inch	CR, CRS	F7

strength performance of the stud by mounting securely to the side plate so as to minimize overhang. It is necessary, therefore, to minimize chamfering at the corner of the stud mounting hole and avoid burrs.

Table 7 Permissible Load Coefficient of Track

Hardness (HRC)	Coefficient	Hardness (HRC)	Coefficient
20	0.4	45	1.4
25	0.5	50	1.9
30	0.6	55	2.6
35	0.8	58	3.2
40	1.0		

of the cage-bearing type. For grease lubrication, limiting speed will be 60% of each value shown in the table.

■ Maximum Clamp Torque

Since the stud of the cam follower receives bending stress and tensile stress from the bearing load, the screw clamp torque should not exceed the value shown in the bearing table. The clamp torque (maximum) in the bearing table is the value when the thread is lubricated, and the value when dry should be approximately doubled.

■ Pre-Packed Grease

The cam follower with a seal is pre-lubricated with lithium soap-based grease.

- Notes (°) USN screws are used in place of UNF screws.
 (°) UN screws are used in place of UNF screws.
 (°) Only the stud head has a lubrication hole.
 (°) 60% of this value will be applied for grease lubrication.

Remarks Standard grease is packed in sealed cam followers, but not in cam followers without seals. Please consult NSK when making a selection.

Abutment and fillet dimensions, and tightening torque are shown on the next page.

(°) These values are for when the screw is oiled; they should be approximately doubled when the screw is dry.

Miniature Cam Follower made of durable, high corrosion-resistant stainless steel ES1

Miniature cam followers are made of durable, high corrosion-resistant stainless steel ES1. These are cam followers with a small diameter and surface area that can be used in various applications and environments where enhanced resistance to corrosion is required.

Standard Specifications for Miniature Cam Followers

Pre-lubricated grease: Lithium soap-based grease is used as lubrication. Accessories: Nut is available as an accessory. Please consult NSK.

The roller follower with a thick-wall outer ring and crowned roller has a large load capacity which enables it to carry shock loads. It is easy to handle because of its non-separating features, and widely used in such applications as track rollers, cams, and rocker arms.

1. Types

Roller followers are available in the types shown in Table 1. All of the bearings in Table 1 have a cylindrical outside surface.

Table 1 Bearing Types

Code		Details
Metric	FYCR	Full complement, without seal
	FYCRS	Full complement, with seal and thrust washer
	FYCJ	With cage, without seal
	FYCJS	With cage, seal, and thrust washer
Inch	YCR	Full complement, without seal
	YCRS	Full complement, with seal and thrust washer

Bearings with the following special specifications are available and can be manufactured upon request:

Special specifications:

Outer ring with a spherical exterior

In this case, your order should be placed as follows:

- ① For metric bearings, **R** should be added to the end of the bearing number.
Example: FYCR-5R, FYCJ-5R, FYCRS-5R, FYCJS-5R
- ② For inch bearings, **C** should be added to the end of the bearing type code.
Example: YCRC-12, YCRSC-12

Spherical radius of outer ring is shown in Table 4 and 6.

Exposed surface treated with a black oxide layer

In addition to the above, products of special shapes and specifications are available and can be manufactured to order. Please contact NSK for further details.

with ISO Class 0 in both cases. Deviations for the above apply to the bearings before surface treatment.

2. Accuracy

Metric roller followers are manufactured in compliance with ISO Class 0, and inch followers in compliance with the tolerances shown in Table 2. Running accuracy complies

Table 2 Tolerances for Inch Bearings

Units: μm

Nominal Bore Diameter, d (mm)		Single Plane Mean Bore Diameter Deviation, Δd_{mp}		Single Plane Mean Outside Diameter Deviation, ΔD_{mp}				Deviation of Outer Ring Width, ΔC_S		Deviation of Overall Inner Ring Width, ΔB_S	
				Cylindrical Outside Surface		Spherical Outside Surface (°)					
over	incl.	high	low	high	low	high	low	high	low	high	low
—	19.05	+5	-10	0	-25	0	-50	0	-130	+130	-250
19.05	57.15	+2	-13	0	-25	0	-50	0	-130	+130	-250

Note (°) Metric bearings have the same dimension tolerance.

3. Applications to Maximize Performance

Fitting

Roller followers are generally used with a transition or loose fit for the shaft because their outer ring rotates. With heavy loads, however, it is recommended to harden the shaft and provide a tight fit. In order to prevent the bearing from moving in the axial direction, both ends of the inner ring should be securely fixed to the plane surface, square to the center axis. To sufficiently support the side plate, the dimension of the shoulder should be larger than the value of F in the bearing table.

Permissible Track Load

Permissible track load values are the same as those for cam followers. Please refer to the explanation on permissible track load on page 6.

Spherical Radius of Outer Ring Outside

Spherical radii for metric bearings are shown in Table 4 and for inch bearings in Table 6.

Table 4 Spherical Radius, R , of Metric Bearings Outside

Units: mm

All Bearing Numbers	R
	500

Table 6 Spherical Radius, R , of Inch Bearing Outside

Units: mm

Bearing Numbers (°)	R	Bearing Numbers (°)	R
YCRC-12	250	YCRC-32	600

YCRC-26	500	YCRC-64	760
YCRC-28	500	YCRC-80	1 200
YCRC-30	500	YCRC-96	1 400

Note (°) While YCRC bearing numbers are listed here, the values of R also apply to YCRSC bearings.

Table 3 Recommended Shaft Fittings

Load	Fitting Tolerance of Shaft
Light Load/Normal Load	g6 or h6
Heavy Load	k6

Pre-Packed Grease

Roller followers with seals are pre-lubricated with lithium soap-based grease.

Limiting speed

The roller follower has a bearing with a cage for high speed applications. Its limiting speed is shown in Table 5.

Limiting speed for the full-complement bearing type is one-third of the value shown in Table 5. For grease lubrication, limiting speed is 60% of each value shown in the table.

Table 5 Limiting Speed for Metric Bearing with Cage

Bearing Numbers	Limiting Speed (rpm)
FYCJ-5	16 000

Remarks Standard grease is packed in sealed roller followers, but not in roller followers without seals. Please consult NSK when making a selection.

Note (°) For grease lubrication, limiting speed will be 60% of this value.
